

Pre-Assembling

The production of construction and production objects of material and technical consumption is carried out in Polyexpim FZE. The entire range of materials is distributed among specialized departments, bypassing the staff in the Department, including:

- Department of rolled metal products, pipe products and fittings;
- Department of power equipment and instrumentation;
- Department of shut-off and control valves;
- Department of block equipment and building structures;
- Department of oil and gas equipment;
- Department of building materials.

At the moment, Polyexpim FZE has over 250 completed contracts with leading domestic and foreign manufacturers. Years of experience in the field of assembly allows Polyexpim FZE to receive preferential pricing and priority production at many manufacturing plants.

Ensuring the proper level of quality of manufactured products, as well as products of sub-suppliers, is carried out by specialists of the Equipment Quality Control Department, which is part of the Procurement Department. The specialists of the quality control department have the necessary qualifications, have been trained and have the appropriate specialized certifications.

To organize the delivery of materials and equipment, the Logistics and Project Support Department was created as part of the Procurement Department. The experience of the company, as well as the existing long-term contracts with transport companies and storage bases, allow for timely delivery, transshipment and storage of goods of any complexity. Specialists of the logistics and project support department also provide the full range of services related to the company's foreign economic activity.
