

Chambers for launching and receiving cleaning and diagnostic tools

Chambers for launching and receiving cleaning and diagnostic tools (SOD) are designed for periodic launching into the pipeline and receiving from it in-line flow detectors, cleaning pigs and other flow tools.

Polyexpim manufactures chambers for pipelines with a diameter of 80 to 700 mm inclusive and a nominal pressure up to 16.0 MPa. The chambers are equipped with a bayonet or clamp (yoke) end gate, depending on the needs of the customer.
